COMPANY OVERVIEW

Ortman Consulting is an 8(a), VA-certified Service-Disabled Veteran-Owned Small Business (SDVOSB) located in Alexandria Virginia. Founded in 2008, our history goes back to supporting the US Air Force Research Lab (AFRL) in cross-domain information technology research and development efforts. From there, we have branched out to support and integrated cross-domain and other secure computing systems as well as secure networking solutions based on the "Commercial Solutions for Classified" (CSfC) guidelines from the National Security Agency (NSA).

Ortman Consulting engineers and consultants focus on delivering innovative technologies to mission users– securely, simply, cost effectively … across any security domain. Our strength is integrating systems that protect enterprise data and endpoint systems at the hardware, software, network, and data layer against known and unknown threats without unneeded restrictions on end-user functionality We are experts in virtual desktop solutions that enable access to data and applications from anywhere – securely and reliably. In collaboration with AFRL, we integrate cross-domain solutions to view and transfer data across security enclaves and enable a new class of secure cross-domain applications for voice, video, and chat.

CORE COMPETENCIES

Ortman Consulting has over 15 years of experience as a system integrator and IT support provider for the Intelligence Community, Department of Defense and Department of Homeland Security. Our core competencies focus on secure endpoint computing and cross-domain services. We have pioneered the deployment of Commercial Solutions for Classified (CSfC) solutions and have deployed and managed secure desktop and secure virtual desktop solutions for government agencies worldwide.
